## **SECURITY ENGINEERING**

Providing defense customers with RMF pre-assessment, DIACAP transition, and cybersecurity engineering support given by experienced staff validators to ensure both classified and unclassified systems and enclaves are compliant with the NIST RMF and operate securely.

## **SECURITY CONTROL ASSESSMENT VALIDATION**

Our team performs around 150 engagements both CONUS and OCONUS each year to validate and authorize systems in accordance with the NIST RMF. Staff are certified up to IAT, IAM and IASAE Level III and include experienced Navy Qualified Validators (NQVs).

## **PENETRATION TESTING**

Vetted expertise to scour technology systems for exploitable vulnerabilities. Our team members expertly probe a system's defenses in accordance with DoD and DHS guidance and best practices. Certified ethical hackers and experienced penetration testers on staff.

## **WEAPONS AND INDUSTRIAL CONTROL SYSTEMS**

Weapons, embedded, and industrial control systems require very different skillsets and tools than a more traditional networked system or enclave. Our team understands this deeply, and has practical experience on large, complex platforms and systems of these types used throughout the DoD.
